WHAT WE OFFER

ICAFe PCR RIGS

The key to running a successful spray foam or polyurea coatings business starts with the correct equipment for the job. At the ICAFe Companies, we believe that every spray foam company is unique and, in such, deserves a turnkey rig customized for their specific want and needs.

We have two rig manufacturing facilities in the United States with only quality equipment and components to withstand the rigors of the spray foam and polyurea industry. Our experienced technicians provide solutions and process support throughout the life of your spray rig.

Each one of our turnkey spray rigs comes with industry leading equipment to perform the application at hand, training for you and your applicators, full manufacturer warranty on all components of the spray rig, and on-going troubleshooting and process support from our team of certified service technicians and customer service representatives.

When you buy a turnkey rig from us, you get a partner for your coatings business!

PROCCCESS SUPPORT & TRAINING

ICAFe Companies fully train their clients on all aspects of the equipment. We provide in house and on-site training, new employee training, recommended maintenance schedules, and much more essential training for a contractor.

When you purchase from ICAFe Companies, you can rest assured that you will know the equipment inside and out prior to showing up to your first job.

REPAIRS & WARRANTY

ICAFe Companies are authorized repair and warranty centers. We handle warranty issues in house and, often times, can perform warranty repairs without sending equipment to the manufacturer. We also have in house service centers with skilled service technicians. Our technicians can provide repair service, on-site service calls and over the phone trouble shooting.
